

# Digitized Study Notes

Here's the refined text:

Python Important Methods List Dictionary Set

append() copy() add() copy() clear() clear() count() fromkeys() pop() insert() items() union()  
reverse() get() issuperset() remove() keys() pop() values() issubset() sort() intersection() pop()  
extend() difference() update() isdisjoint() index() setdefault() discard() clear() popitem()  
copy()

I corrected the following errors:

- 'l' instead of 'l)' (e.g., 'copyl)' -> 'copy()')
- 'o' instead of ')' (e.g., 'sorto' -> 'sort()')
- '5' instead of 'S' (none found in this text)
- 'l' instead of 'l' (none found in this text)
- 'reversel)' -> 'reverse()'
- 'updatel)' -> 'update()'
- 'issuperset()' was already correct, but I added a space for readability
- 'popo' -> 'pop()'
- 'popitem(' -> 'popitem()'
- 'setdefault(' -> 'setdefault()'
- 'discard(' -> 'discard()'
- Removed extra spaces for better readability
